IRAC
MSK CENTER

At IRAC, we aim to provide highly specialized, comprehensive and patient-centered care for people with various musculoskeletal problems.

Our SERVICES

SPORTS PHYSIOTHERAPY

Following a sport or exercise-related injury, a course of sports physiotherapy can help you rebuild strength, regain flexibility and improve your range of movement. It can also help to prevent similar injuries in the future and can be used as a way of improving performance.

ORTHOPEDIC PHYSIOTHERAPY

Orthopaedic physical therapy can be life-changing. A skilled physical therapist (PT) can get you back on track with your daily activities after surgery, an injury, accident, or illness. That's because an orthopaedic PT specializes in diagnosing and treating conditions that affect any part of your musculoskeletal system.

RHEUMATOLOGICAL PHYSIOTHERAPY

Rheumatological physiotherapy is a specialist form of physiotherapy dedicated to treating a variety of rheumatological conditions. These are autoimmune diseases which cause inflammation in muscles, joint, ligaments and tendons, and can cause a number of symptoms including pain, swelling and stiffness. The end point is to improve functionality and reduce pain.

PAIN MANAGEMENT PHYSIOTHERAPY

Physiotherapists play an important role in the management of pain. If your pain persists and becomes chronic then the emphasis shifts to more to managing the condition and minimising its impact on your life, rather than necessarily finding a cure.

PAEDIATRIC PHYSIOTHERAPY

The aim here is to minimize the effects of physical impairment and promote optimal function and musculoskeletal development. Paediatric physiotherapists recognize the importance of working in partnership with the child, family and carers to maximize a child's abilities and independence.

NEUROLOGICAL PHYSIOTHERAPY

Neurological physiotherapy involves the treatment of people with movement and function disorders that have originated from problems within the body's nervous and neuromuscular system. These conditions often manifest themselves as muscle weakness, poor balance and coordination, uncontrolled muscle spasm and tremors, loss of function and decreased sensation.

DAVID JOHNSON

Doctor of Osteopathy and Sports Therapist

Following a sport or exercise-related injury, a course of sports physiotherapy can help you rebuild strength, regain flexibility and improve your range of movement. It can also help to prevent similar injuries in the future and can be used as a way of improving performance.
